Multiplying 2-digit numbers by 2-digit numbers

Partition one number into 10s and 1s, then add the parts.

$$23 \times 15 = ?$$

$$10 \times 15 = 150$$

$$3 \times 15 = 45$$

$$3 \times 5 = 15$$

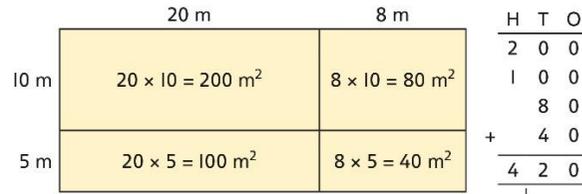

There are 345 bottles of milk in total.

	H	T	O
	1	5	0
	1	5	0
+		4	5
	3	4	5
			1

$$23 \times 15 = 345$$

Use an area model and add the parts.

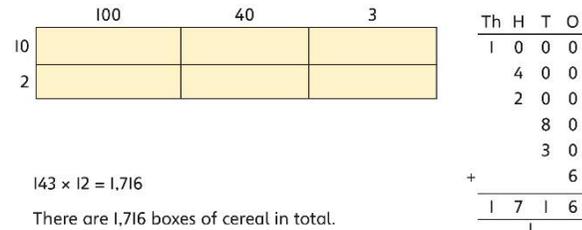

$$28 \times 15 = ?$$

$$28 \times 15 = 420$$

Multiplying up to 4-digits by 2-digits

Use the area model then add the parts.

$$143 \times 12 = 1,716$$

There are 1,716 boxes of cereal in total.

$$143 \times 12 = 1,716$$

Use column multiplication, ensuring understanding of place value at each stage.

	3	4		
×	2	7		
	2	3	8	
			34 × 7	
			—	
		3	4	
×	2	7		
	2	3	8	
			34 × 7	
			—	
		6	8	0
				34 × 20
				—
			3	4
×	2	7		
	2	3	8	
				34 × 7

		6	8	0
				34 × 20
				—
		9	1	8
				34 × 27
				—
				1

Use column multiplication, ensuring understanding of place value at each stage.

	1	4	3		
×		1	2		
	2	8	6	143 × 2	
	1	4	3	0	143 × 10
	1	7	1	6	143 × 12
					—
					1

Progress to include examples that require multiple exchanges as understanding, confidence and fluency build.
 $1,274 \times 32 = ?$

First multiply 1,274 by 2.

	1	2	7	4		
×			3	2		
	2	5	4	8	1,274 × 2	
	3	8	2	2	0	1,274 × 30
					—	
					1	

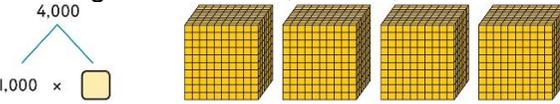

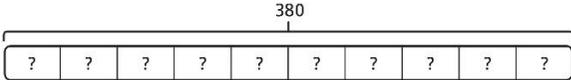

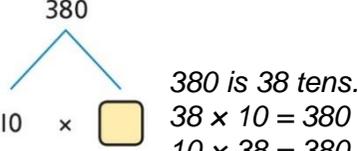

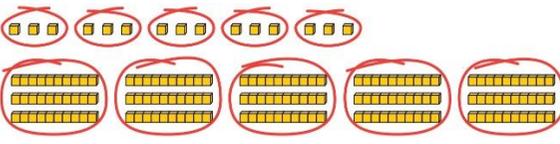

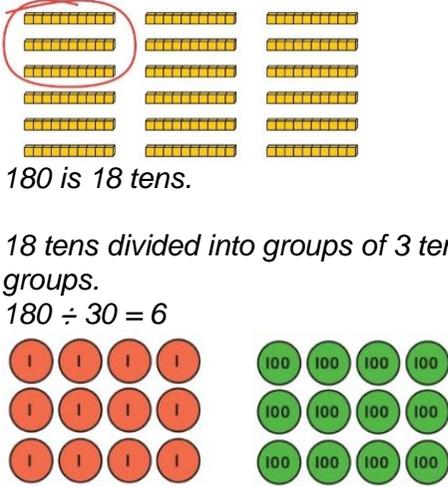

Then multiply 1,274 by 30.

	1	2	7	4		
×			3	2		
	2	5	4	8	1,274 × 2	
	3	8	2	2	0	1,274 × 30
					—	
					1	

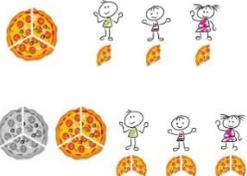

Finally, find the total.

$$1,274 \times 32 = 40,768$$

Comparing and selecting efficient methods

Represent 7-digit numbers on a place value grid, and use this to support thinking and mental methods.

M	HTh	TTh	Th	H	T	O
●●	●●●●	●	●	●●●		●

Discuss similarities and differences between methods, and choose efficient methods based on the specific calculation.
Compare written and mental methods alongside place value representations

TTh	Th	H	T	O
●●●●		●●	●●●●	●●●●
	●●●●	●●●●	●●	●●

TTh	Th	H	T	O
4	0	2	6	5
+	3	5	2	2
<hr/>				

Use bar model and number line representations to model addition in problem-solving and measure contexts.

Use column addition where mental methods are not efficient. Recognise common errors with column addition.

$$32,145 + 4,302 = ?$$

TTh	Th	H	T	O
3	2	1	4	5
+	4	3	0	2
<hr/>				
3	6	4	4	7

TTh	Th	H	T	O
3	2	1	4	5
+	4	3	0	2
<hr/>				
7	5	1	6	5

Which method has been completed accurately? What mistake has been made?

Column methods are also used for decimal additions where mental methods are not efficient.

H	T	O	·	Tth	Hth
1	4	0	·	0	9
+	4	9	·	8	9
<hr/>					
1	8	9	·	9	8

Selecting mental methods for larger numbers where appropriate

Represent 7-digit numbers on a place value grid, and use this to support thinking and mental methods.

M	HTh	TTh	Th	H	T	O
●●	●●●●	●	●	●●●		●

$$2,411,301 + 500,000 = ?$$

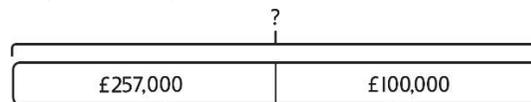

This would be 5 more counters in the HTh place.

So, the total is 2,911,301.

$$2,411,301 + 500,000 = 2,911,301$$

Use a bar model to support thinking in addition problems.

$$257,000 + 99,000 = ?$$

I added 100 thousands then subtracted 1 thousand.

$$257 \text{ thousands} + 100 \text{ thousands} = 357 \text{ thousands}$$

$$257,000 + 100,000 = 357,000$$

$$357,000 - 1,000 = 356,000$$

$$\text{So, } 257,000 + 99,000 = 356,000$$

Use place value and unitising to support mental calculations with larger numbers.

$$195,000 + 6,000 = ?$$

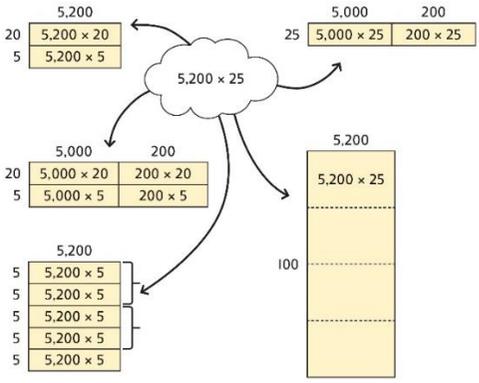

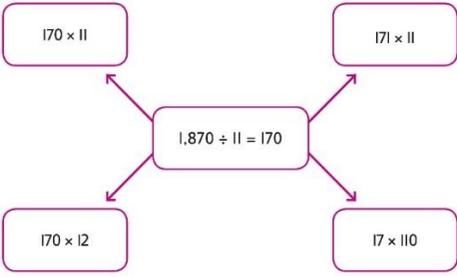

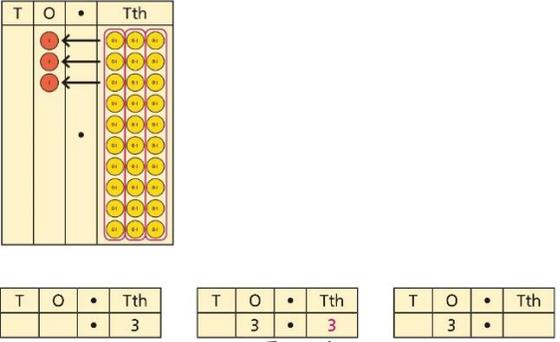

$$195 + 5 + 1 = 201$$

$$195 \text{ thousands} + 6 \text{ thousands} = 201 \text{ thousands}$$

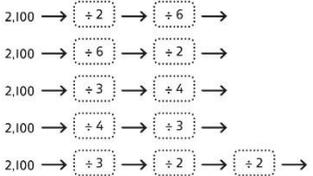

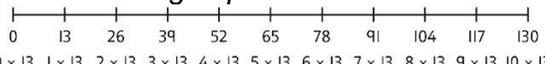

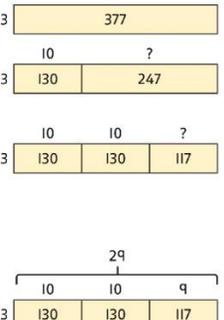

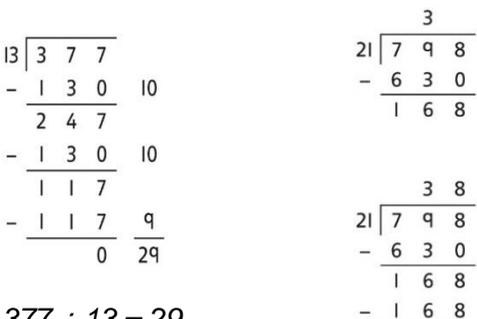

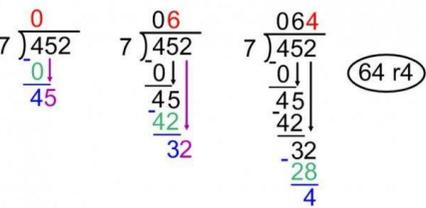

$$\text{So, } 195,000 + 6,000 = 201,000$$

<p>Understanding order of operations in calculations</p>	<p>Use equipment to model different interpretations of a calculation with more than one operation. Dividing by a 2-digit number using long division	<p>Use equipment to build numbers from groups.</p> <p>182 divided into groups of 13. There are 14 groups.</p> 	<p>Use an area model alongside written division to model the process.</p> $377 \div 13 = ?$  $377 \div 13 = 29$	<p>Use long division where factors are not useful (for example, when dividing by a 2-digit prime number).</p> $377 \div 13$  <p>$377 \div 13 = 29$</p> <p>A slightly different layout may be used, with the division completed above rather than at the side.</p>  <p>Step 1: "How many times?" Step 2: "Multiply" Step 3: "Subtract" Step 4: "Drop it down" (repeat steps for each number, left to right)</p>

Dividing by 10, 100 and 1,000

Use place value equipment to explore division as exchange.

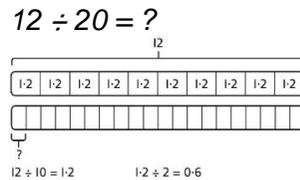

0.2 is 2 tenths.
 2 tenths is equivalent to 20 hundredths.
 20 hundredths divided by 10 is 2 hundredths.

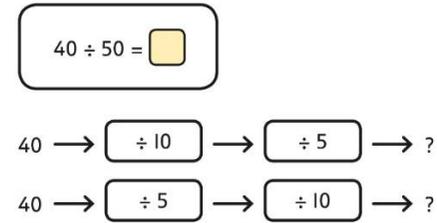

Represent division to show the relationship with multiplication. Understand the effect of dividing by 10, 100 and 1,000 on the digits on a place value grid.

Understand how to divide using division by 10, 100 and 1,000.

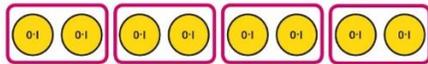

Use knowledge of factors to divide by multiples of 10, 100 and 1,000.

$40 \div 5 = 8$
 $8 \div 10 = 0.8$
 So, $40 \div 50 = 0.8$

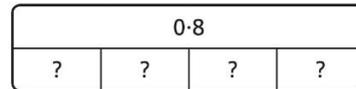

Dividing decimals

Use place value equipment to explore division of decimals.

8 tenths divided into 4 groups. 2 tenths in each group.

Use a bar model to represent divisions.

$4 \times 2 = 8$ $8 \div 4 = 2$
 So, $4 \times 0.2 = 0.8$ $0.8 \div 4 = 0.2$

Use short division to divide decimals with up to 2 decimal places.
